

UK Myasthenia Database Consortium Author List 2026

The [UK Myasthenia Database \(UKMyDb\)](#) Consortium is a UK-wide network of clinicians, researchers, specialist nurses, and data management staff working collaboratively to collect and curate high-quality data on individuals living with myasthenia gravis (MG), Lambert–Eaton myasthenic syndrome (LEMS), and congenital myasthenic syndromes (CMS). Established in 2018 and hosted by the University of Oxford, UKMyDb supports clinical research, epidemiological studies, service development, and future therapeutic innovation through the responsible use of anonymised patient data. The creation of the database was made possible through funding from [Myaware](#).

This author list is updated annually to reflect the evolving membership of the Consortium. We gratefully acknowledge the invaluable expertise, commitment, and dedication of all colleagues who contribute to UKMyDb. Their sustained efforts make this national resource possible and ensure its continued value to patients, clinicians, and researchers. We also extend our sincere thanks to the patients who generously contribute their data and support this initiative. Their participation is fundamental to advancing our understanding of myasthenic disorders and improving care for current and future generations.
